## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

3. Claims 1 and 3-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over US 6,265,479 to Ichikawa et al.
4. The rejection set forth under 35 USC 103 in the paper mailed 1/12/07 is deemed proper and is herein repeated.

### ***Response to Arguments***

5. The newly amended claims and remarks filed in support thereof have been fully considered and been found not persuasive.
6. Applicants main point of contention is that the prior art suggests centrifugation as a means for removing non-rubber components. The claims have been limited to treatments without separation of non-rubber components by centrifugation. This is not

Art Unit: 1713

seen to be a patentable distinction. The art suggests the use of centrifugation as a means of separating non-rubber components. The art is not limited to the use of centrifugation but rather suggests other means of separating non-rubber components such as ultrafiltration, see column 5 lines 12-20. It would be prima facie obvious to one of ordinary skill in the art to select ultrafiltration as a means for separating rubber. This would read on the claims. Further, one of ordinary skill understands the functional non-rubber components and the properties that they impart to the resultant rubber composition. As such, property manipulation obtained by adding/removing non-rubber components is understood and within the skill of one in the art. The alleged unexpected results in the specification fail to sufficiently rebut the prima facie case of obviousness. These results simply show that different compositions have different properties.

### ***Conclusion***

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
